BACKGROUND OF THE INVENTION

20 Oxidative degradation, in the form, e.g., of spoilage of
food, beverages or other organic products, or of the corrosion of
metals, is a serious problem that affects and undermines the
quality of everyday social life and the endurance of industrial
products. Extensive efforts have been undertaken to design
25 preservatives and shelf-life extenders, e.g., for the food and
beverage industry, and to fabricate products such as steam
generators, heat exchangers, bridges, oil drilling platforms and
motor vehicles that can resist the destructive effect of
corrosion. For many traditional products, new developments in
30 energy sources, advances in material sciences, microprocessing
technology and miniaturization of new devices to the micron scale
all reinforce the demands for effective anticorrosion technologies
that avert food spoilage and device failures.
